

Interprofessional Learning in the Hospital

Russell, L., Nyhof-Young, J., Abosh, B., & Robinson, S. (2006). An exploratory analysis of an interprofessional learning environment in two hospital clinical teaching units. *Journal of Interprofessional Care*, 20(1), 29-29-39.

An analysis of a teaching environment with regard to interprofessional practice during practicums was done using both qualitative and quantitative methods. Results demonstrated that nurses and other health professionals had a more positive view of interprofessional collaboration than physicians. Students also had little understanding of the nature of collaborative behavior. These results have implications for the design of interprofessional curriculum in clinical practicums.
