LGBT Health in Cancer Care

Health care for lesbian, gay, bisexual, and transgendered (LGBT) patients can be a complicated mix of physical, psychosocial, and cultural phenomena. LGBT patients have unique health issues that need to be incorporated into clinical practice to provide comprehensive and culturally appropriate care. This seminar will focus on providing comprehensive cancer care, from screening to treatment, for members of the LGBT patient population. Current research involving Jefferson's Kimmel Cancer Center and LGBT patients will be highlighted.
